1 Introduction
The Prizmatix Optogenetics-LED module is specially designed to provide high power Light to activate opsins in Optogenetics experiments with freely moving mammals. This LED light-source provides powerful light pulses triggered by external TTL input.

1.1 Features
- High Power
- Reciprocal SMA fiber connection
- Precisely adjustable power by 10 turns potentiometer
- TTL external modulation input (up to 50KHz)
- Analog input (0-5V) for power control
- TTL and Analog Inputs are Optically Isolated

Wavelengths: Violet, Blue, Green Red

1.2 Intended Use
The Optogenetics-LED is an in-vivo illuminator designed to be used with free-moving small animals inside maze systems. The unit is self-contained. The LED light exits through an SMA ferrule directly to an attached 1000um POF, which is connected to a rotary joint. On the other side of the rotary joint is a 500um POF which shall be connected to the implanted cannula in the animal.

2 Safety
Please make yourself familiar with the contents of these operating instructions before using the Optogenetics-LED system. Use the illuminator only as specified in this manual. Otherwise, the protection provided by the illuminator may be impaired.

The following symbols are used for the warnings:

⚠️ CAUTION! Failure to comply with the safety instructions can be hazardous to the user.

⚠️ CAUTION! Failure to comply with the safety instructions can result in damage to the instrument.

Do not use the illuminator if it is damaged. Before you use the illuminator, inspect the case. Look for cracks or missing parts.

Do not use the device around explosive gas.

Never operate the illuminator with the cover removed or the case open.
2.1 Eye Safety

The Optogenetics-LED illuminator is assigned to following risk groups according to IEC 62471: 2006. The assignment done based on the standard system configuration as explained in section 3.3.2. The assignment results are summarized in Table 1.

Table 1: Optogenetics-LED illuminator assignment to risk groups according to IEC 62471: 2006.

<table>
<thead>

</table>

The products Optogenetics-LED-Violet and Optogenetics-LED-Blue are marked on the product with following label:

**Risk Group 2**

CAUTION Possibly hazardous optical radiation emitted from this product

2.1.1 Special Safety Notes

Table 2 summarize the safety notes specific to various product types (IEC 62471-2/TR (1st edition, 2009), Table 2 page 17).

Table 2: Safety notes specific to various product types

2.1.2 Hazard Distances (HD)

Following Table 3 provides the distance from distal end of the fiber at which the threshold illuminance EL returns the product to RG 1.

**Table 3**: Distances from distal end of the fiber at which the photochemical hazard reduces to Risk group 1, for relevant products.

3 Set-up of the Device

Remove the device from the packaging and inspect the device for loose components or any signs of damage. Notify Prizmatix if the device appears damaged in any way: do not install or operate a damaged device.

3.3 System Overview

3.3.1 Optogenetics-LED Controls

The front panel of Optogenetics-LED unit features: (1) SMA connector for optical fiber, (2) 10 turn dial of precision potentiometer for manual setup of output power, (3) LED Enable (ON/OFF) switch.

The back panel of Optogenetics-LED unit features: (1) Power adaptor input socket, (2) Main power switch, (3) Connector for Analog input (0-5V) for control of LED power from computer, (4) Toggle switch Analog Input Int/Ext to enable control of LED power by external analog input, (5) Connector for TTL input, (6) Toggle switch TTL Input Int/Ext to enable control of LED ON/OFF by external TTL signal.

⚠️ CAUTION!: Do not use the illuminator without the Optical Fiber connected to SMA port!
3.3.2 Typical System Setup

Typical Optogenetics setup will include following components:

1. **Optogenetics-LED** - Fiber coupled LED light source
2. **Optogenetics-Fiber-1000** - Polymer optical fiber 1000um core, NA 0.63, length 1m, optical connectors SMA-FC
3. **Rotary Joint** - Enables free movement of the mammals
4. **Optogenetics-Fiber-500 / Optogenetics-Fiber-Dual-500** - Single or Dual branch (Y-shape) polymer optical fiber 500um core, NA 0.63, optical connectors FC-ferrule
5. **Cannulae** - One or two fiber optic implant shall be connected to 500um fiber by a sleeve
6. **Pulser** - Pulse generator to provide fast TTL pulses to the LED

3.4 Initial Set-up of Optogenetics-LED

1. Set Power Switch on back panel of the unit to OFF position and connect power adaptor to the back of the unit and into wall mains socket.
2. Set both the TTL and Ain (Analog Input) switches on back panel to ‘Int’ position.
3. Connect the Optogenetics-Fiber-1000 fiber to the front panel SMA connector.
4. Connect the other end of the Optogenetics-Fiber-1000 fiber to the Rotary-Joint.
5. Connect the FC connector on the 500um fiber to the Rotary-joint.
6. Push the back-panel power switch to the "ON" position, and then Press the green button on front panel to turn the LED on (the internal green light of the button is turned on too). Turn the dial of the potentiometer clockwise. The LED light should be seen at the ferrule on the 500um fiber.

⚠️ CAUTION!: Do not stare at operating lamp. May be harmful to the eyes

7. LED power can be adjusted using the 10-turn potentiometer on front panel.
8. Press the green button once again, the LED is turned off (as indicated by the button light). Make sure to turn the unit off by switching the Power Switch on back panel before disconnecting from power supply.
9. For TTL input connect BNC cable to TTL input connector on back of unit. To enable TTL control change the position of the TTL Int/Ext switch to Ext position.
10. For Analog Input connect BNC cable to Ain input connector on back of unit. To enable Analog Input control change the position of the Ain Int/Ext switch to Ext position

⚠️ CAUTION!: Do not use the illuminator without the Optical Fiber connected to SMA port!

⚠️ CAUTION!: Do not cover back panel of unit - ensure that air can circulate freely.

3.5 Cleaning
Keep the connector port clear from dirt and do not leave it open. Make sure to close the SMA port with the chained cap when the fiber is not connected.

⚠️ CAUTION!: Do not try to clean inside the port – you may damage the illuminator!

The box can be wiped with mild wet-wipes.

⚠️ CAUTION!: Do not attempt to use chemicals, e.g. Alcohol or Acetone – you may damage plastic components
